Tue., December 7, 2021 • 1pm-2:00pm EST (60 min)

Webinar Description: From identifying funding opportunities to clicking “submit,” navigating the grant process can be challenging. In this webinar, you will learn how to craft more competitive grant applications and increase the success rate of your submissions. You will learn about the steps you may need to take before you even start writing, including how to identify priority projects, determine suitable funding sources, and avoid common pitfalls.

Presenters will apply key tips to various funding opportunities, including the National Fish and Wildlife Foundation’s (NFWF) National Coastal Resilience Fund (NCRF). NCRF invests in projects that will create, expand, and restore natural systems in areas that will (1) increase protection for communities from coastal storms, sea- and lake-level changes, inundation, and coastal erosion and (2) improve valuable habitats for fish and wildlife species.

NCRF’s team of Field Liaisons, Throwe Environmental, will share funded projects and be available to help you understand how communities can take advantage of the NCRF and other funding sources. Participants are invited to bring ideas and questions for a Q&A following a presentation.
